

## Claims

- [c1] 1. A method for providing information to a client browser, the method comprising:
- sending a first request from a client to a server;
  - responsive to the first request, initiating a request to create a token;
  - responsive to the first request, sending information from the server to the client, the information including at least display data and a first link corresponding to the token;
  - rendering the display data in a browser of the client;
  - sending a second request from the client to the first link;
  - determining whether the token is created; and
  - if the token is created, sending the token to the client.
- [c2] 2. A method according to claim 1, further comprising:
- starting a timer after initiating the request to create a token.
- [c3] 3. A method according to claim 2, further comprising:
- if the token is not yet created, comparing the timer to a predetermined value.
- [c4] 4. A method according to claim 3, further comprising:
- if the timer exceeds the predetermined value, sending a second link to the client, the second link corresponding to the token.
- [c5] 5. Computer executable software code transmitted as an information signal, the code for providing information to a client browser, the code comprising:
- code to send a first request from a client to a server;
  - responsive to the first request, code to initiate a request to create a token;
  - responsive to the first request, code to send information from the server to the client, the information including at least display data and a first link corresponding to the token;
  - code to render the display data in a browser of the client;
  - code to send a second request from the client to the first link;
  - code to determine whether the token is created; and
  - if the token is created, code to send the token to the client.

[c6]

6. A computer readable medium having computer executable code stored thereon, the code for providing information to a client browser, the code comprising:

- code to send a first request from a client to a server;
- responsive to the first request, code to initiate a request to create a token;
- responsive to the first request, code to send information from the server to the client, the information including at least display data and a first link corresponding to the token;
- code to render the display data in a browser of the client;
- code to send a second request from the client to the first link;
- code to determine whether the token is created; and
- if the token is created, code to send the token to the client.

[c7]

7. A programmed computer for providing information to a client browser, comprising:

- a memory having at least one region for storing computer executable program code; and
- a processor for executing the program code stored in the memory, wherein the program code comprises:
  - code for providing information to a client browser, the code comprising:
    - code to send a first request from a client to a server;
    - responsive to the first request, code to initiate a request to create a token;
    - responsive to the first request, code to send information from the server to the client, the information including at least display data and a first link corresponding to the token;
    - code to render the display data in a browser of the client;
    - code to send a second request from the client to the first link;
    - code to determine whether the token is created; and
    - if the token is created, code to send the token to the client.
